

MDG41 is a set of guidelines for the safe installation/manufacture and use of hydraulic equipment, hoses and accessories. At Eagle Pro we are able to provide a **MDG41** compliant hose that will meet requirements of the guide lines. The requirement applies to any pressurised fluid or gas systems used to create, capture and transmit energy. The guidelines are there to prevent and control any of the following hazards occurring in regards to this product.

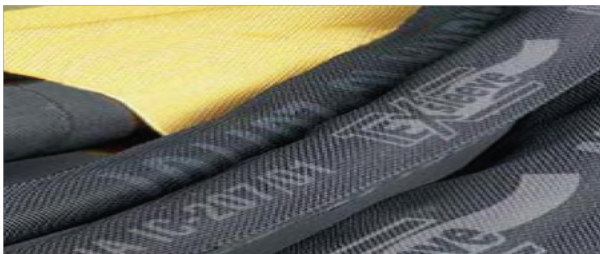

Hazards

High pressure injection
Environmental damage
Burns
Ignition or explosion
Fuelling fires

Compliant Hose Features

- 1) Highly abrasion resistant.
- 2) Highly burst resistant.
- 3) Very effective in reducing the effects of the pinhole leaks.
- 4) Designed to offer excellent leakage containment

Optional Eagle Pro hydraulic hoses utilise a continuous nylon fibre, which can contain the fluid and prevent the escape of fluid into the atmosphere, and therefore protect from personal injury. This product meets all the needs of personal safety, durability and environmental protection as set down by the NSW Department of Primary Industries Mines Department Guideline.
